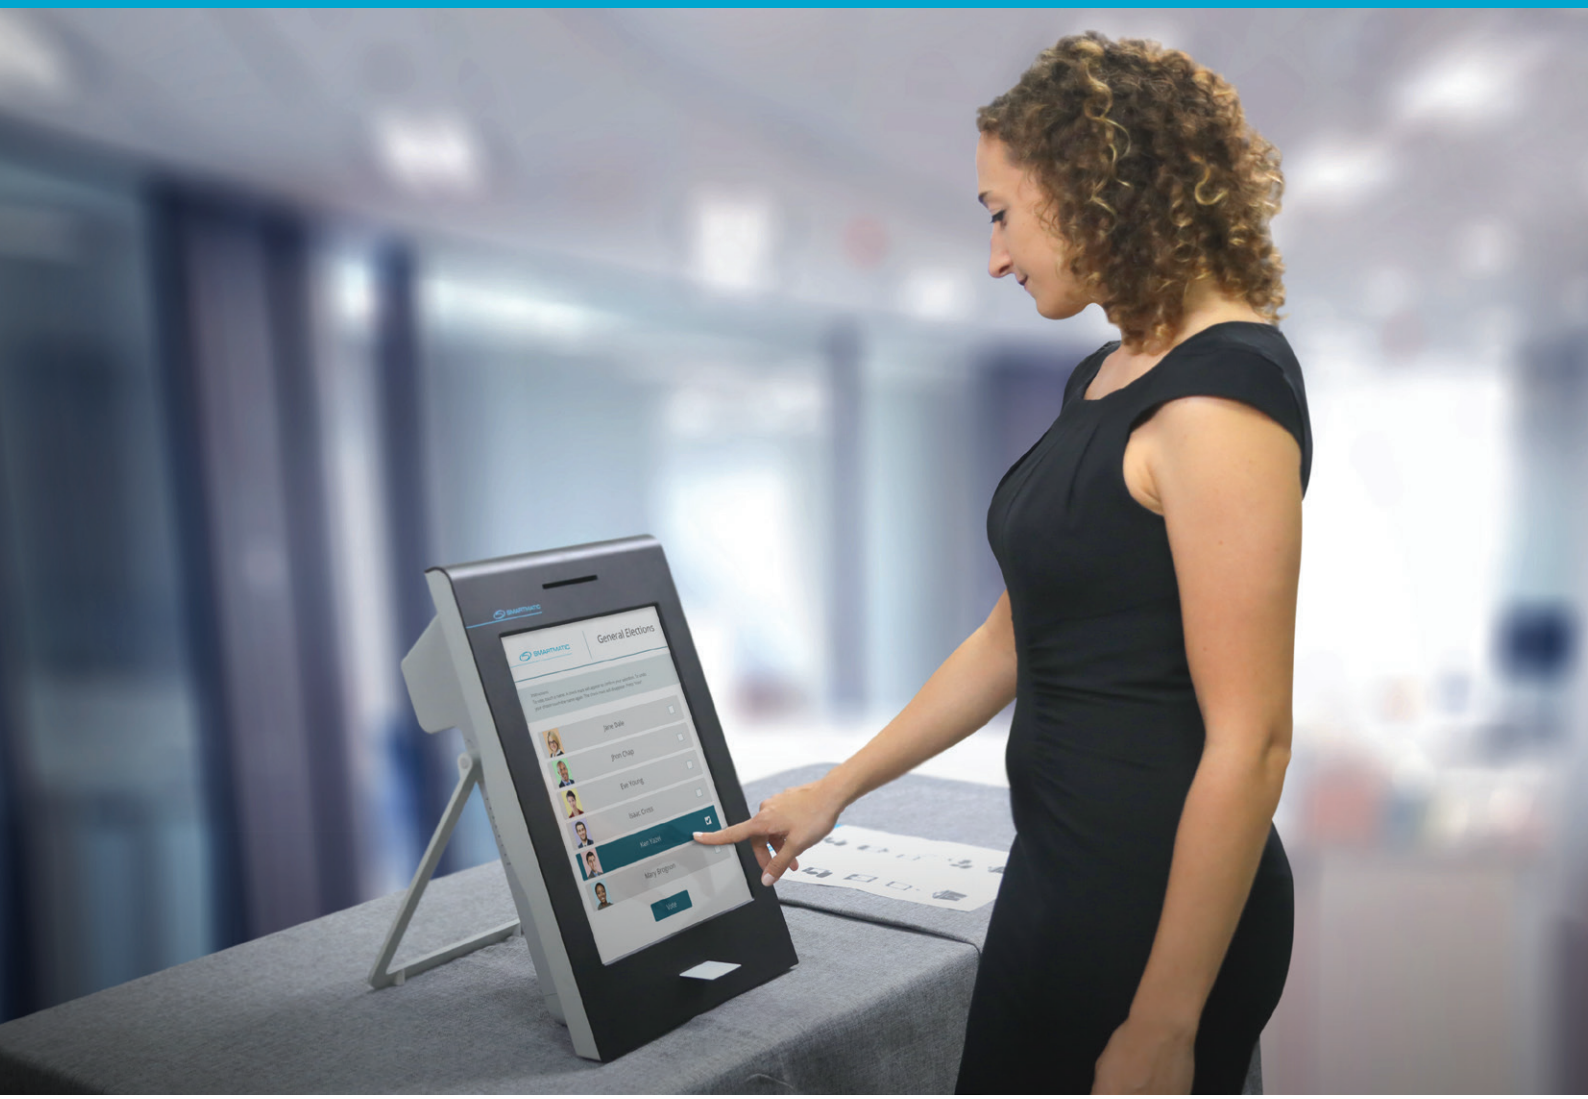
SMARTMATIC



Elections Portfolio

Enriching the Election Experience

The highest levels of security, accessibility, and usability

Smartmatic helps election commissions worldwide run the most transparent and efficient elections. To do so, we deploy innovative technology and offer a range of bespoke services for every individual stage of an election.

We are enhancing the election experience with our highly secure & intuitive election solutions.

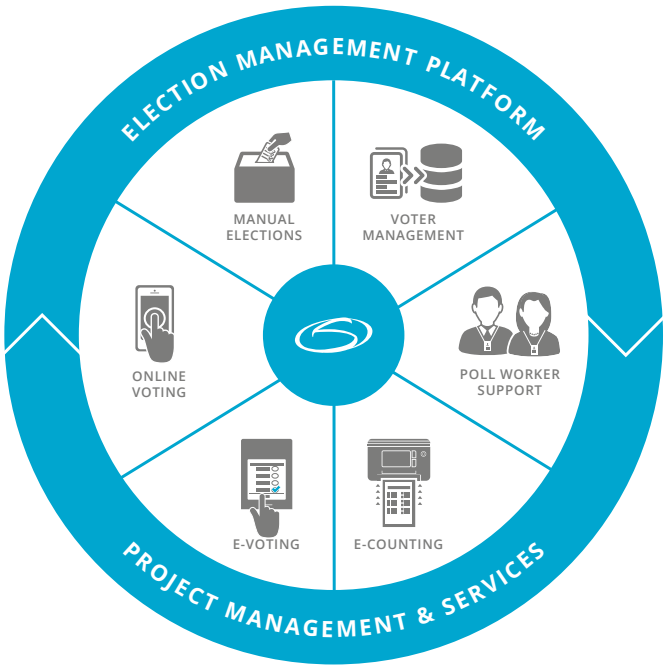
Voters, poll workers, and election officials all benefit from the best election experience provided by our user-centered designed technology that simplifies election and voting processes and allows independent voting for all voters.

The world's most experienced election technology and services provider

Smartmatic's comprehensive portfolio is the result of more than 15 years of meeting the needs of election commissions around the world. We have provided technology and services to election commissions from the USA, Belgium, Norway, Estonia, Italy, Argentina, Brazil, The Philippines, Sierra Leone and many other countries.

Our election portfolio offers those managing the election a complete suite of technology and services to make every stage of the process more efficient and transparent.

Election Technology & Services



Manual Elections

Critical election processes, such as voting, counting and consolidating results are still being done manually in most countries around the world. **To increase transparency and improve the integrity of manual elections**, we offer several solutions, such as SmartTally to consolidate and transmit results quickly and accurately, and e-Counting for both precinct as well as central locations.

Voter Management

The efficient and transparent management of voter information is crucial for a legitimate election. Therefore, **Smartmatic offers authorities technology they can use to build accurate, secure and reliable voter databases** that include biographic and biometric information from every single voter. These databases can be used on Election Day, along with its voter authentication devices, to guarantee the one-voter, one-vote principle.

Poll Worker Support

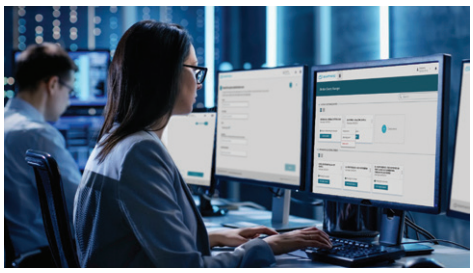
Poll workers have the enormous responsibility of creating the conditions for a seamless, trouble-free voter experience. **Smartmatic empowers them with technology that facilitates poll station administration and helps enforce regulations.**

e-Voting & e-Counting

Technology can make voting easier, more transparent, accurate, and secure for every voter. Smartmatic supports any type of election, regardless of how the votes are cast, electronically via voting machines, or with paper ballots, which can be counted electronically.

Online Voting

As worldwide election turnout continues to decline, and voters increasingly demand more convenient channels to participate in democracy, authorities are receiving pressure to offer more and better alternatives for voting. **Smartmatic developed a class-leading online voting solution for those who need to cast their vote remotely.**



Election Management Platform

Understanding the complexity of running a successful election, Smartmatic designed an intelligent web-based platform to centralize decision making.

The nine modules of our EMP give authorities the possibility of configuring their systems, monitoring and controlling logistics and operations, announcing results through different channels, training staff and many other essential tasks.

Project Management and Services

In addition to cutting-edge technology, **Smartmatic offers authorities all the services necessary to conduct an impeccable election.**

The company developed a unique project management methodology that is based on the methods of the International Project Management Institute and its own experience in delivering successful elections worldwide.

About Smartmatic

Founded in the USA in 2000 and currently headquartered in London, Smartmatic serves customers through an organization comprising over 500 employees across 15 offices around the world.
