

Smartmatic e-Poll Book Solution

Fully Integrated for Voter Satisfaction and Election Security

Plug & Play Deployment

Fast Voter Check-in

Accurate and Secure

Forget sending voter data out to be configured. Forget bulky peripherals and tangled cables. Forget complicated workflows and confused poll workers. In fact, forget everything you've been told about e-Poll books.

Our unique e-Poll book solution is the only fully integrated, purpose-built e-Poll book (EPB) on the market—and it's like no other e-Poll book solution you've ever seen.

Two industry leaders, Smartmatic and DemTech, have teamed up to give you:

- Better security for your voter data
- Easy, customizable layout
- Complete control of all e-Poll books
- Simple setup on Election Day
- Faster, more accurate voter check-in
- Reliable performance

This new EPB solution combines Smartmatic's durable, ergonomically designed e-Poll book hardware with DemTech's intuitive and powerful CenterPoint-e-PollTAB software. You also get Merlin, the most advanced way to securely connect and synch within your network of e-Poll books. The result is a fully self-contained solution that is both plug-and-play simple and highly configurable, giving you the flexibility you need to succeed.

Unlike other e-Poll book solutions, ours can be used right out of the box because it has a built-in thermal printer, barcode reader and credential scanner. It even has a rechargeable battery for emergencies. Just plug it in and go. No dragging around peripheral devices, no sorting out tangled cords, and no hauling outdated, labor-intensive paper books.

Election officials, poll workers and voters all benefit from our integrated solution.

- Fully integrated, lightweight and easy to set up
- Independent software and EPB management
- Intuitive interfaces reduce poll worker training
- Customizable check-in workflow engine for control
- Wizard-guided operation simplifies poll workers' tasks
- Fast, scan-based voter search (no typing needed)
- Secure data encryption via Merlin secure communications device
- Knowledgeable, personalized support for your team

Data Control, Data Integrity

You have complete control over your data, ensuring its integrity. You also control the way your e-Poll books look and operate.

Using DemTech's unique data management functions, information can be imported from any vendor's voter registration system without having to process the information offsite, as other vendor solutions require.

- Using the set-up wizard you can format your e-Poll book in less than 15 minutes: import rules, set check-in types and user-defined corresponding workflows
 - You can easily build, import/export and save your own templates
 - Customize everything from reports to receipts—it's all under your control
-

Merlin's magic

Merlin is an advanced Hardware Security Module (HSM) connecting and synching your e-Poll books. It can connect via WAN or LAN, or it can connect by functioning as a Mi-Fi hotspot.

Merlin allows your e-Poll book data to be securely deployed, updated and synched, before, during or after Election Day events. Merlin can also be used in offline mode with no outside connectivity in the precinct. Or it can be used fully online and connected using the Amazon Web Services (AWS) cloud. When AWS is enabled, Merlin allows the jurisdiction to view the day's activities in real time via a customizable web dashboard that can be viewed securely from Election Central.

Merlin works right out of the box, providing a highly efficient precinct data vault service and advanced communication management. It provides the highest security encryption available FIPS 140-2 with full CIS security protocols and automated reporting center. Merlin also works as a backup for your e-Poll books during the election.

Fully Integrated e-Poll book Solution

Plug-and-play simplicity with all the control and encrypted security you need.

- Built-in thermal printer, barcode reader and document scanner
 - 10" capacitive touchscreen with comfortable 30° viewing angle
 - 3 lockable USB ports can be secured with tamper-evident seals
 - Dual smartcard reader for contact/contactless reading
 - Signature-capture capability
 - Optional Wi-Fi and Bluetooth connectivity
 - Windows 10 OS

About Us

Smartmatic

Smartmatic is a world leader in secure, auditable election technologies—from voter registration, to vote tabulation, to results reporting and auditing. Smartmatic voting machines produce both an electronic record and a human-readable paper ballot to validate voter intent. Working from industry best practices, we continuously develop innovative strategies to stay ahead. Our technologies use human-centric design principles to make voting accessible, so citizens with disabilities can vote independently and equally with all others. Our products and services include staffing, training, and logistics, simplifying the whole management process for election management bodies.

DemTech

DemTech has more than 25 years of experience designing and developing software solutions for the US Elections Marketplace. DemTech, a leader in providing specialized, advanced election software for many different voting channels, such as UOCVA, e-Poll book, Voter OutReach, Sample Ballot Delivery, and many more innovative technologies. These technologies are designed to deliver a robust user experience, allowing the voter to have control of their vote.
