

Secure & Verifiable Online Voting

TIVI - An accessible voting channel
for all remote voters

Enfranchise voters who are unable to vote in-person

Today there are countless reasons why citizens are unable or unwilling to vote in-person at polling stations. That doesn't mean they don't want to vote.

Smartmatic brings the ballot to the voter with TIVI. TIVI is an additional voting channel which allows any remote voter who chooses to participate in an election to do so securely, safely and privately from their home or from wherever they are.

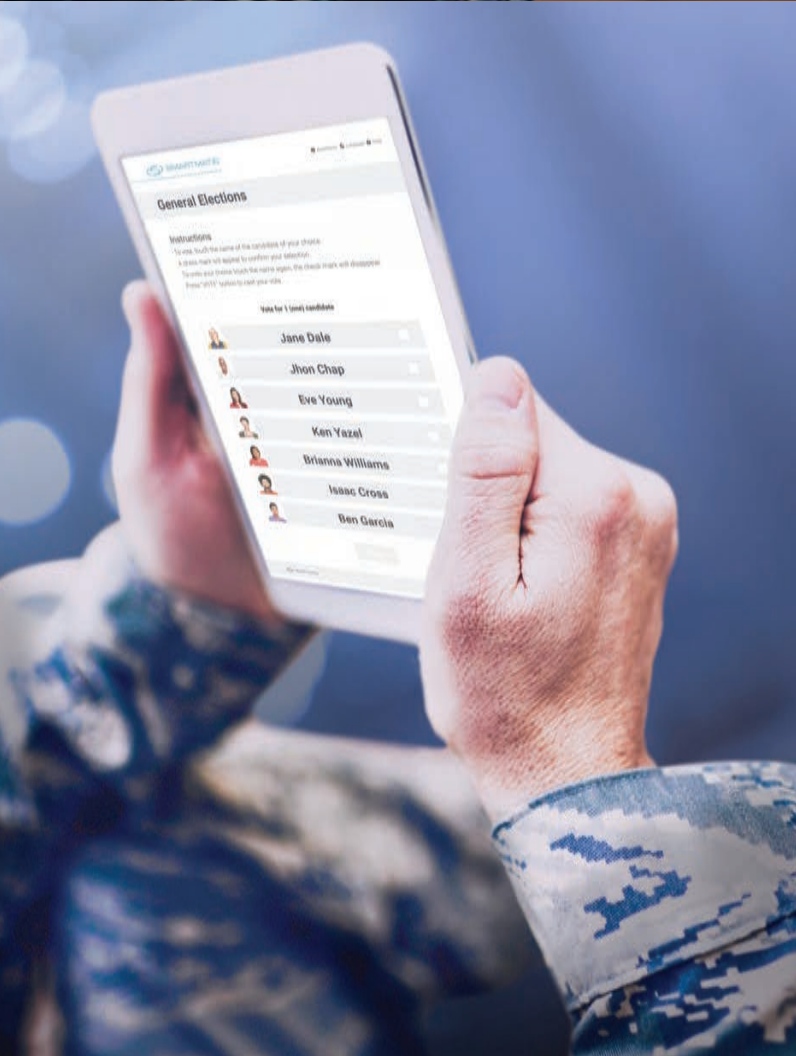

Delivering accessibility. Ensuring integrity.

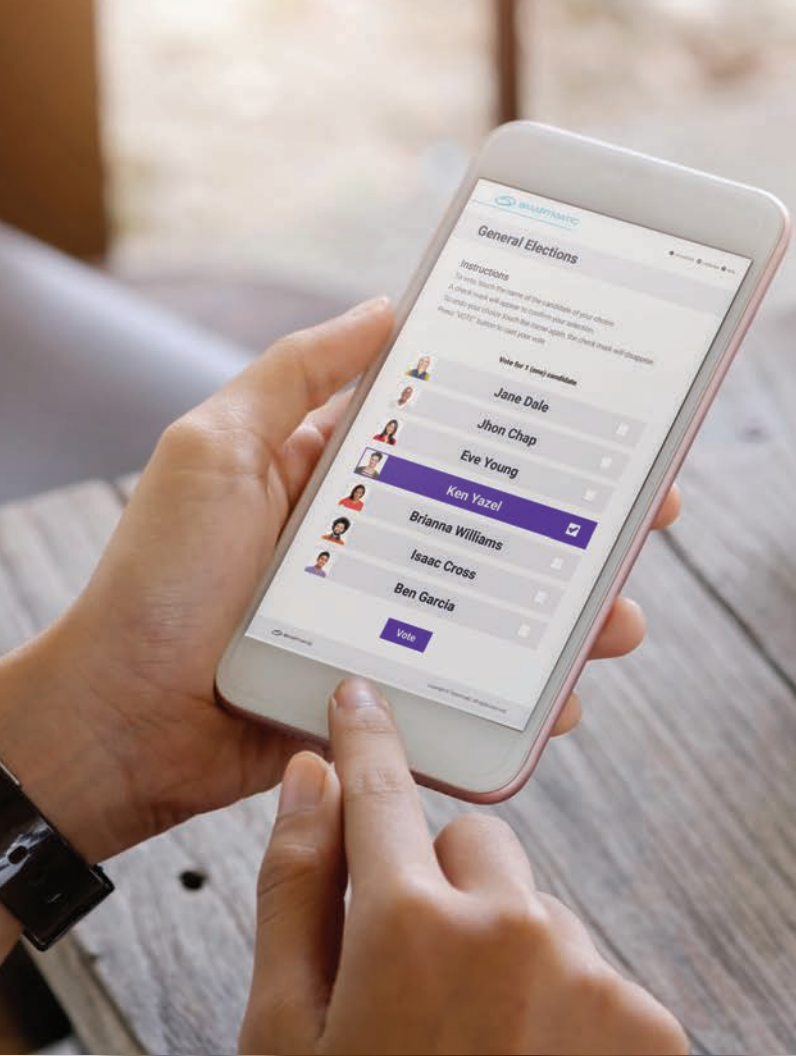

As part of our Remote Voting Platform, we offer governments TIVI, a secure, accessible and verifiable online voting solution. Designed and developed by the team behind the Estonian government voting platform, TIVI has been used successfully in the 2016 Utah Republican caucus and in Norway, Chile and Albania.

TIVI has been specifically engineered to address the unique challenges of remote voting, ensuring:

- Streamlined, cost-effective access to ballots and voting materials;
- Immediate receipt of completed ballots from anywhere in the world;
- Voter privacy and vote secrecy;
- Elimination of vote tampering;
- Mitigation of voter coercion;
- Compliance with accessibility standards;

**TIVI is an additional
voting method offering
voters the convenience
and flexibility to
securely cast a
verifiable ballot using
their own smartphone,
laptop, tablet, or
desktop
anytime, anywhere.**

Bringing the ballot to the voter

Online voting brings the ballot to the voter and is therefore the perfect solution to enfranchise voters who are unable to vote in a polling station. It helps to increase participation, reduce cost, improve efficiency and address the accessibility needs of persons with disabilities.

Best-in-class security

TIVI uses end-to-end encryption and digital signing to strongly protect ballot secrecy and to eliminate vote tampering.

Voter eligibility guaranteed

To accurately verify the identity of the voter, TIVI includes a variety of strong authentication methods, so only eligible voters are permitted to cast their ballot.

Universal digital verifiability

Unlike any other online voting solutions out there, TIVI offers universal digital verifiability allowing the voter to confirm the integrity and correctness of their cast vote using a Blockchain-based public bulletin board.

A cost-effective alternative

TIVI allows voters to cast ballots from home, far more secure and at a cost significantly below that of traditional mail-in voting methods.

Globally Renowned R&D Expertise

TIVI was conceived and engineered by globally recognized experts in election technology, identity management, information security, cybersecurity and verifiable cryptography. This team developed the Estonian online voting solution, which has been used in every nationwide election since 2005.
