

Safe

At-Home Voting

Secure, Auditable Online Ballot Delivery & Return Platform

A secure and convenient additional voting channel that simplifies remote voting for jurisdictions. The platform allows for online authentication, ballot delivery, onscreen marking, printing and manual return.

Flexible

Includes multiple remote voting options and is easily configured to support changes in jurisdictions' requirements, laws and needs.

Accessible

Complies with global and local accessibility standards, such as WCAG and is meant for all remote voters, including UOCAVA and displaced voters.

Cost-effective

Allows voters to cast ballots from home, far more secure and at a cost significantly below that of traditional Vote-by-Mail methods.

Bringing the Ballot to the Voter

One platform – Multiple Options

When in-person voting is not an option, we bring the ballot to the voter with our Remote Voting platform. The platform enables free, safe and accessible remote voting while maintaining voter privacy, election security and full process transparency.

Benefit from an accessible and secure voting alternative that offers multiple options:

1 Online Ballot Delivery

Voters download and print their ballot, fill it out by hand and take the printed ballot to a designated drop-off location or mail it in. Each jurisdiction will set its own standards for casting ballots.

2 Online Ballot Delivery with Onscreen Marking

Similar to OBD, this option also allows for accessible onscreen marking. Voters mark their ballots onscreen, then generate a ballot summary with human-readable text and a QR code. Voters print their ballot and return it by mail or at a drop-off location. Voters have the additional option to send their ballot summary to their smartphone, which they can then bring to a polling station. There, it is quickly and accurately scanned to generate a paper ballot.

Regardless of the method of how the ballots are received, the ballots will be included into the jurisdictions' existing paper tabulation processes. Also, our ballot-tracking system always provides election officials and voters insight into the ballot status.

Let us reduce the burden on you and your staff

Smartmatic has an entire division dedicated to logistics and support services to help you with Vote-by-Mail services, deployment, change management, risk mitigation, supplemental staffing and precinct contagion minimization.

Smartmatic's remote voting solutions offer poll workers and voters proven tools and services to organize and conduct free, safe and accessible elections without putting their health and safety at risk.
