

Central Scanning & Tabulation

Increases the
Accuracy, Efficiency
and Transparency
of Your Vote
Counting Processes

Smartmatic offers election management bodies (EMB) a line of high-performance central scanning solutions powered by intuitive ballot-processing software to accurately tabulate large quantities of ballots fast.

Using scanners to digitize and tabulate paper ballots, particularly complex ones, increases the accuracy, efficiency and transparency of vote counting while maintaining the paper ballot as a final input for auditing.

A More Efficient Process

Automated vote counting makes the tabulation process faster and more reliable while the paper ballot remains the final input for audits. Reduce the time to count votes from days to merely hours.

A Line of Central Scanners

Our line of central scanners meets the requirements and budget constraints of any EMB. All scanners are compatible with our user-centered ballot-processing software that simplifies operator responsibilities.

Benefit from Our Experience

We are election experts. We understand your challenges. From London to Oman and Georgia to the Philippines, EMBs have benefitted from our secure e-Counting technology and support services.

The World Leader in Applied Cybersecurity for Elections

Established in Florida in 2000, Smartmatic initially developed secure software for banking and IoT. After the “hanging chads” occurrence during the 2000 US election, the company shifted its focus to improving voting. Since then, election officials have used Smartmatic systems to record and tabulate more than 6.5 billion votes with zero security breaches.

From Los Angeles to The Philippines, from Utah to Belgium, and from London to Argentina, Smartmatic has successfully deployed secure election technologies in more than 30 countries.

An Advanced Electronic Vote-counting Solution for London, UK

In 2019, the Greater London Authority (GLA) appointed CGI, supported by Smartmatic, to manage the city's vote-counting process in one of the most complex elections in the United Kingdom. This included setting up the three count centers, managing London Borough staff training, and secure vote counting.

In May 2021, people from the London Boroughs and the City of London successfully cast 10.6 million votes in local and mayoral elections. As CGI's partner, Smartmatic provided:

- 234 optical scanners to process the ballot papers in three count venues.
- 17.2 million printed postal and polling station ballot papers.
- 12,000 disposable ballot boxes.
- Software for the electronic counting solution.
- Support to the three count venues and the central consolidation site during the live counts
