

Transform Your Election Data into Actionable Insights

Smart Dashboard

**Full visibility
for optimized
decision making**

Elections are among the most complex projects countries undertake. To guarantee citizens can vote freely, securely and conveniently, election management bodies (EMB) need a flawless plan and impeccable execution. The perfect coordination of thousands of moving parts requires full visibility into what is happening at all times.

To help EMBs meet this challenge, Smartmatic offers Smart Dashboard. This service provides election officials with a full understanding of each election stage and process at any given point in time.

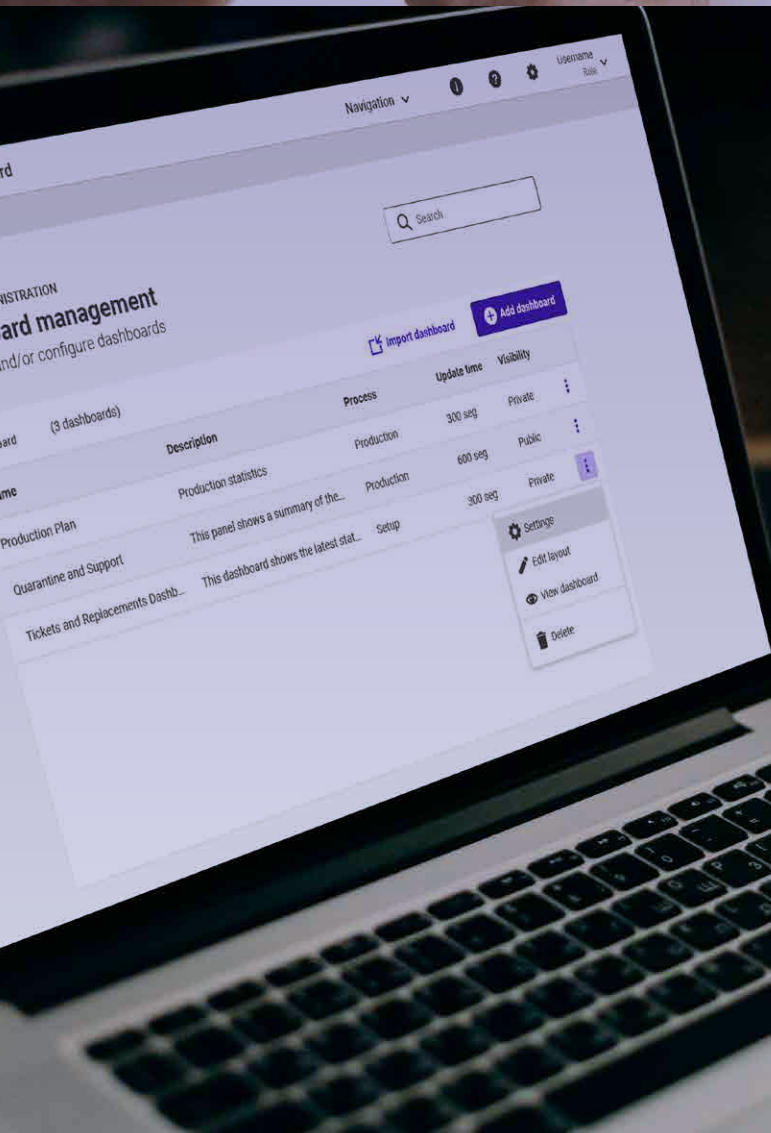

At-a-glance visibility with Smart Dashboard

To conduct successful elections, officials need a full understanding of all election processes, but few EMBs have the staff to do this.

Smartmatic can do the heavy lifting. We organize and analyze huge amounts of data and generate reliable, actionable insights that optimize election operations and decision-making, today and in the future.

Our powerful Smart Dashboard application is available in a mobile app and a browser-based version. This application integrates with the most commonly used data sources (Mysql, MariaDB, Postgres, Oracle, MS SQL Server, CSV Files), leverages information in real-time, and provides advanced visualizations and interactive maps.

With the click of a button officials can know how many poll workers attended a training, how many voting devices were dispatched when and where, or how many voters are still queueing.

Empowering election officials to make instant, reliable, data-driven decisions with the click of a button.

A complete view of the election in your hands.

From poll worker training to the preparation of equipment to results transmission, election officials can understand what is happening in real-time, quickly assess incidents and take prompt, data-driven action when needed.

Flexibility on the go

Responsive design screens ensure clear, appropriately formatted information on any device screen, providing flexibility and convenience for every location and situation.

Deliver the right data to the right people

Our solution includes robust security and access management to properly deal with sensitive information. Role-based access authentication and authorization provides full traceability of all user interactions. It also allows filtering to determine what information can be viewed by each user.

Information preservation

The advanced visualization capabilities of Smart Dashboard and its connectivity with live and in-memory data guarantee that if a datasource is broken or down, it will show the last information gathered.

Satisfied customers around the globe

Smart Dashboard has been used by Smartmatic in serving its customers in Los Angeles, Australia, Honduras, Uganda and the Philippines.

**Count on Smartmatic
to do the heavy lifting
of organizing and
analyzing huge amounts
of data to generate reliable,
actionable insights.**

The world leader in applied cybersecurity for elections

Since 2000, Smartmatic focused on designing and building cybersecure election technologies that are innovative and easy to use – for voters, poll workers and election officials – while protecting the integrity of the election process from start to finish.

Cybersecurity is our first and most important design consideration. Leveraging a solid election cybersecurity framework developed by Georgia Tech Research Institute, we apply a “defense-in-depth” concept that employs multiple layers of protection combined with a variety of safeguards and audit mechanisms. Adding simplicity to our focus ensures that security is not a tradeoff for usability or accessibility.

Smartmatic is the world leader in applied cybersecurity and secure election technology—from voter registration, to vote tabulation, to results reporting and auditing. Since its incorporation in the US in 2000, Smartmatic auditable and cybersecure solutions have processed billions of votes in elections all with zero security breaches.
