

Secure Results Collection & Transmission

SmartTally

Fast Results Processing and Transmission for Manual Elections

SmartTally equips poll workers in polling stations and operators in consolidation centers with technology to securely collect, transmit, and consolidate paper tally reports and provide accurate results quickly.

Versatile

- Transmit from anywhere
- Consolidate multiple contests
- Leverage for training and reporting

Reliable

- Intuitive interfaces
- Fast
- Accurate & accountable

Secure

- Scalable
- Workflow oriented
- Rely on a solid security framework

The SmartTally solution includes the following options and can be used on any type of device:

An intuitive mobile app, which enables authorized poll workers to easily digitize polling station tally reports in real-time;

A desktop app that allows authorized users to digitize tally reports, either from polling stations or from regional collection centers;

And, a web-based system that helps users to type-in paper tally reports for fast, and accurate processing and verification.

SmartTally is a multi-platform solution that supports poll workers and election officials with capturing, transmitting and consolidating paper tally reports generated in manual elections.

Versatile

- This multi-channel solution collects tallies at four different levels:
 - Polling station;
 - Regional;
 - Distributed;
 - and at the central level.
- The solution can also be used for voter verification, poll worker training and status/incident reporting during Election Day.

It is key during manual elections to collect and process tally reports quickly, and to prevent data modification due to human error or interference of any kind.

Reliable

- All of Smartmatic's products and solutions are user-centered designed. The software offers intuitive interfaces for ease of use, to prevent errors on results reporting.
- Accuracy, speed and accountability of the process are reached by SmartTally through data validation, digital signatures and audit trails of each point of the solution.
- The scalable architecture allows to manage the demand without compromising the operation.

Secure

- SmartTally leverages a solid security model developed by the Georgia Tech Research Institute and follows guidelines from specialized entities, such as CIS and EI-ISAC.
- This security model has been used in countries like UK, Belgium and USA, and provides complete controls to the entire solution at any level from devices to server.

The scalable SmartTally solution prepares, delivers and manages all the information necessary to conduct an election.

The Leading global
provider of secure
election technology

Smartmatic specializes in the design and deployment of election system technologies. As the global leader in providing secure, transparent, accessible, verifiable voting systems, Smartmatic is setting the standard for election integrity and inclusivity worldwide, including encrypted results transmission, paper ballot back-up, extensive auditing and Internet voting.
